# Subway Car

Have you been looking for a SUBWAY CAR MOCK UP that is EASY to transport, EASY to light, and EASY to shoot? The CBS Studio Center Subway Car is all that and more.

The mock up is built in two trailer sections, which can be rented as a complete set or individually.

The interior is equipped with dimmable fluorescent ceiling fixtures and accent lighting. The side doors are designed to operate from house air.

Motion effects are easy to create because each half of the trailer rests on leaf spring supported wheels.

All side walls, ceiling sections and center posts are wild to accommodate any desired angle or shot.

To transport the subway, you need to provide a stake bed truck (with a hitch) and a wide load permit.
